

# Ambitine®

**A proprietary blend of key plant extracts and acidifiers that supports immuno-competence and gut integrity in late-finishing pigs.**

- Specifically designed for late finishing pigs (last 70 lbs of gain)
- Supports immuno-competence and gut integrity
- Optimizes performance in the last weeks before market

The late finishing period in swine production can be a critical time for certain stressors to become apparent, such as increased intake and feeder competition. The heavier weights (290-300 lbs) before market can also drive heat stress and other potential challenges (exacerbated by required antibiotic withdrawal).

Nutritional programs are designed to optimize animal performance and production efficiency. Inclusion of functional ingredients, such as plant extracts, are often directed at supporting optimal gut integrity. Strategies that combine these tools are frequently needed to ensure success. High gut integrity results in optimized endogenous secretions which supports digestion and nutrient absorption. High gut integrity also requires less energy expenditure for maintenance; more nutrients are available for production parameters.

Ambitine® consists of a proprietary and carefully researched blend of key plant extracts and acidifiers. These are functional nutrients that optimize immuno-competence and gut integrity supporting optimal swine finisher performance.

Ambitine® has demonstrated excellent ROI potential and is easy to use with no additional reformulation needed.

## **Recommended inclusion level:**

Mix at the rate of 2 lbs/ton of complete feed for finishing pigs (last 70 lbs of gain).
