

FORTIVA™

Enterprise Calf Pack

- Heat stable and designed for use in calf starter and grower diets
- Combination of prebiotics, probiotics, essential oils and palatants that support gut health and dry matter intake

Nutritional programs are designed to optimize animal performance and production efficiency. The inclusion of functional ingredients, such as prebiotics, probiotics, plant extracts and specialty flavorings, is typically directed at supporting optimal gut integrity. Maintaining optimal gut integrity, endogenous enzyme secretions support digestion and nutrient absorption together with requiring less energy expenditure for maintenance, therefore making more of the nutrients available for production parameters.

Strategies that scientifically and synergistically combine these functional ingredients are often needed to ensure success. Enterprise Calf Pack functional components include prebiotic polysaccharides obtained from Fulfill®, consisting of glucans, mannans, chitins and galactans combined with essential oils, plant extracts, palatants and viable *Saccharomyces cerevisiae*.

FEATURES

Active, live yeast

Prebiotic

Palatants

BENEFITS

Stabilize rumen environment during periods of altered feeding behavior and ration changes

Support gut integrity and inhibition of pathogens

Support feed intake

AVERAGE DAILY INTAKE OF GRAIN MIX

Up to 3 lbs.

3 to 6 lbs.

6 to 10 lbs.

INCLUSION LEVEL

7.5 lbs. per ton of feed

5 lbs. per ton of feed

3 lbs. per ton of feed
